📍 Piroozi, Tehran, Iran

Profile Summary

I am a front-end developer with over 5 years of experience. I started with jquery javascript. Then I became interested in vuejs and nuxtjs and did some projects in this field. In the development of my projects, I used tailwind and pinia extensively. I have been working with reactjs and nextjs for some time and I would like to gain more experience in working with this framework. The colleagues I worked with know me as disciplined, committed to work and interested in teamwork.

I am also familiar with php laravel, but my expertise is in the field of front end.

- Site optimization for SEO (using Google lighthouse and gtmetrix)
- Perform tasks based on taskulu
- Using vuejs components in some pages such as login (OTP component)
- Checking google analytics and fixing the reported problems
- Working with fullcalendar to register the class time by the teacher and show it to the learner

Projects

Pardad Industrial Group

For: Ali Saadatnia

September 2025

I worked remotely as a Frontend Developer with Pardad Industrial Group for three years, contributing to two main projects: an internal admin panel and the company's official website. The admin panel was developed using Vue 3, and the multi-page corporate website was built with Nuxt, serving as the main presentation platform of the company. I implemented pixel-perfect user interfaces based on Figma designs, with a strong focus on user experience, clean and scalable code structure, and detailed UI interactions. I also handled frontend-side SEO optimizations, including page structure and metadata improvements, while collaborating closely with a Laravel-based backend team. The quality of the work resulted in consistent positive feedback from the team.

Samayesh

For: Saman Tadbir Fartak

2025

This company is a specialized manufacturer of comprehensive monitoring systems in the pharmaceutical and data center fields. I worked on the main project of Samayesh, which operates in this field. In addition to that, I created several other projects from scratch

Link: <https://demo.samayesh.com>

Farsiex

For: Omidavaran Bamdad

2024

This company operates in the field of crypto currency. And during my cooperation with this company, I created and developed two exchange and otc projects from scratch.

Link: <https://farsiex.com>

Chatbot

For: IT Talie

2023

This company operates in the field of insurtech and I had the honor of working with this group for several months. During this time, I was working on a project called Chatbot, which worked in such a way that the user could chat with the artificial intelligence bot and answer any questions asked about insurance. I implemented this project from the beginning with nuxt3, tailwind and pinia.

Samfaa (The sales and screening management system for cinemas across the country)

For: Ajand Pardazesh Baman

2022

Ajand Pardazesh Baman company has a project called Samfaa, and I worked on this project in this company. Samfaa is the name of the sales and screening management system for cinemas across the country. In this system, a panel with special access is considered for each of the roles of cinema owners, producers, sales systems, etc. And each of these users is able to create and view cinema schedules, selling tickets, viewing sales reports, etc according to their access level. Fajr vote registration system was one of the projects of this company during the Fajr festival which I participated in its development.

Link: <https://panel.samfaa.ir>

Tikkaa

For: Tikkaa

2021

Tikkaa is an online language learning system that has three user roles, each with separate panels: language learner, teacher, and main admin. Language classes are held in systems such as BBB or Skype, and information about classes, the possibility of offering classes by teachers, and the possibility of booking classes by students are all available on the Tikkaa site.
